GETTING STARTED WITH QUICKCODE WORKSPACE

QuickCode Workspace is the first app of Goodie Yahnz, launched on 26th December, 2024. It is a browser based code editor where one can code HTML, CSS, JavaScript, and other programming languages that can be written in an ordinary text area.

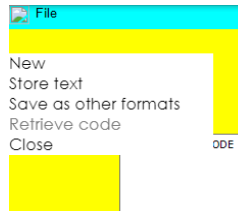

FEATURES AND USES

This is QuickCode Workspace environment

This is QuickCode Workspace's workspace

THE FILE BUTTON

This opens other tools which are;

New: Which opens a new QuickCode Workspace file (from the url).

Store text: To save/ store your text that will be retrieved for later

Save as other formats: To save in your own language, not as a QuickCode Workspace file

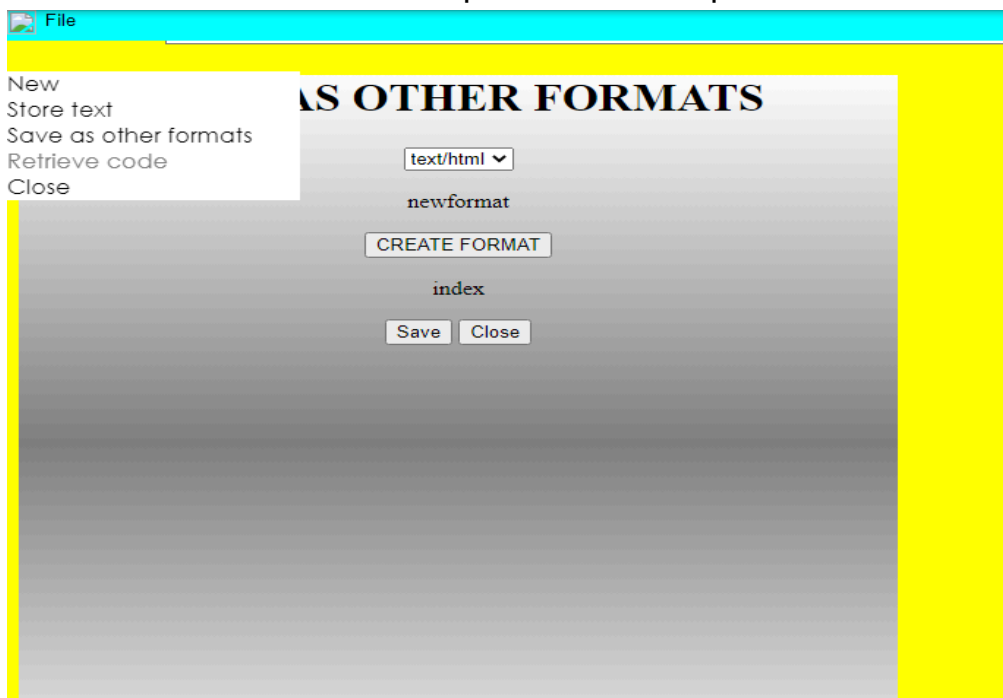

Close: closes the file

HOW TO CREATE AN HTML FILE

STEP 1: START CODING

STEP 2: CLICK SAVE AS OTHER FORMATS.

This pane should open

Here,  you select the language you want to save your file as

Incase your language is not there, write the file type here 

And click this button. 

If your file type is already there, just type your file name here 

STEP 3: Then click this save button.
